Marketplace Activity API

Last Updated 01-22-2024

Date	Update
01-22-2024	Added terms
9-15-2023	API rate limits updated
4-7-2023	Added Related Transaction Query (Can be used to retrieve awarded Collectible Editions from an opened Pack)
11-14-2022	Clarifying HTTP request verbs and response codes
11-11-2022	First Published

The Marketplace Activity API is a collection of endpoints which will be exposed to the public for the consumption by individuals or 3rd party stats providers. This document is intended as a technical overview of the various endpoints available along with a description of parameters and outputs.

In accordance with the [DraftKings Terms of Use](#), you may not use any API (including without limitation, to any public API) or any DraftKings issued end point to create, use, operate, or employ any bots, robots, parser, spiders, scripts, programs, routines, or any other forms of automation for any component of a transaction on the DraftKings Marketplace or the Website. In addition, you may also not use any web scraping, web harvesting, or data extraction methods to extract any data from the Website or the DraftKings Marketplace.

Base Url

`https://marketplace.draftkings.com/api/activity/{Version}`

Version	Notes
v1	Version one provides the ability to query the following: • NFT Transactions across all of Marketplace • NFT Transactions by Merchandise • NFT Transactions by a specific Merchandise Edition (coming soon) • Related Transactions by TransactionKey (coming soon) ○ For retrieving all awards received as part of a pack open transaction

Key Terms

Term	Description
Transaction	An action (defined by TransactionType) that occurred relating to a specific Merchandise Edition in Marketplace
Collectible	A limited NFT series of a single collectible digital asset where each NFT (Edition) in the series shares the same details (except Edition Number).
Collectible Edition	A unique edition of a Collectible designated by the Edition Number. Each edition is a distinct NFT with the corresponding Edition Number.
Pack	An entity that represents the shared details for a particular set of Pack Editions.
Pack Edition	A specific edition of a Pack which has been minted as an NFT, Pack Editions produce a predefined amount of Collectible

	Editions when opened. Despite the fact that they exist on-chain, Pack Editions can only be opened on DK Marketplace. Pack Editions are also interchangeable until opened so they do not have Edition Numbers. Instead they are identified by a PackEditionKey
Merchandise	Either: • Collectible • Pack
Merchandise Edition	Same as above
Attribute	Is a name/value pair that is defined for a piece of Merchandise (NFT) and used for describing distinguishing features.

Type Definitions

Some endpoints below have certain types that are either taken in or returned as strings.

MerchandiseType

Name	Description
Collectible	See Key Terms
Pack	See Key Terms

TransactionType

Name	Description
PrimaryPurchaseConfirmation	• Provides price, time, and user information about Collectible/Pack Editions purchased from Drops

	- Includes Merchandise metadata
SecondaryPurchaseConfirmation	- Provides price, time, and user information about Collectible/Pack Editions purchased from the secondary market - Includes Merchandise metadata
SellPlacement	- Provides price, time, and user information about Collectible/Pack Editions listed on the secondary market regardless of whether it actually sold - Includes Merchandise metadata
PackOpened	- Provides user information and time information about when a Pack Edition was opened - Includes Merchandise metadata
PackAward	- Provides user information and time information about a Collectible Edition that was revealed from a Pack Edition - Includes Merchandise metadata - Includes basic parent Merchandise metadata ○ Excludes Thumbnail
AdminReward	- Provides user information about Collectible/Pack Editions airdropped or otherwise gifted inside the Marketplace - Includes Merchandise metadata

AwardFromSupplier	- Provides user information about Collectible/Pack Editions won in an internal DK contest - Includes Merchandise metadata
AwardFromAuction	- Provides price, time, and user information about Collectible/Pack Editions won through an auction - Includes Merchandise metadata
TransferComplete	- Provides blockchain wallet, transaction, time, and user information about Collectible/Pack Editions withdrawn from marketplace to an external wallet - Includes Merchandise metadata
DepositComplete	- Provides blockchain wallet, transaction, time, and user information about Collectible/Pack Editions deposited to a marketplace portfolio from an external wallet - Includes Merchandise metadata
Minted	Includes time and Merchandise metadata from when any Edition was minted by marketplace
AwardFromCrafting	- Provides information about Collectible/Pack Editions awarded from a crafting recipe - Includes Merchandise metadata

Burned	
	- Provides information about Collectible/Pack Editions burned on the blockchain and no longer available in marketplace - Includes Merchandise metadata

EventType

Event types represent aggregations (or in some cases one-to-one mapping) of TransactionType. These are the types that are used as filter parameters instead of TransactionType, but transaction type names are included in responses on individual transactions

Name	TransactionTypes represented
Sales	The event type accounts for - PrimaryPurchaseConfirmation - SecondaryPurchaseConfirmation
Listings	SellPlacement
Prize	AwardFromSupplier
Open	PackOpened
Reward	AdminReward
Won	AwardFromAuction
Withdraw	TransferComplete
Deposit	DepositComplete
Received	PackAward
Mint	Minted

CraftingAward	AwardFromCrafting
Burn	Burned

Endpoints

The Activity API contains the following endpoints

Activity Feed Query

Route

Route	Description	Example
POST /transactions	Retrieves paged transaction details with corresponding Merchandise metadata from the marketplace that matches the provided filter criteria	Retrieve all Sales transactions: *curl --location --request POST 'https://marketplace.draftkings.com/api/activity/v1/transactions' * *--header 'Content-Type: application/json' * *--data-raw '{* *"EventTypes": ["Sales"]* *}'*

Request Parameters

Parameter	Type	Description
Limit	Int	Page size - currently 200 is the maximum page size we support for this query. If no limit is provided, the default is also 200

Cursor	String	This value is for paging and should be obtained off of the response from this query and sent back to get the next page
EventTypes	Array of Strings	See EventType definitions If no event types are provided then all will be included. Passing in "All" explicitly also has the same effect Exception: when requesting "All" (or with no EventType filter), the following event types are not included: ● Received ● Mint
MerchandiseType	string	See MerchandiseType definitions
MinPrice	decimal	When filtering for EventTypes that include prices, the dictates the lowest price desired in the result set
MaxPrice	decimal	When filtering for EventTypes that include prices, the dictates the maximum price desired in the result set
CollectionKeys	Array of Guids	Dictates which collections are represented in the result set. See Collections and Suppliers for possible values
SupplierKeys	Array of Guids	Dictates which collections are represented in the result set. See Collections and Suppliers
MerchandiseKeys	Array of Guids	Dictates what specific merchandise will be represented in the result set.

Response

Body

This is the main body of the response

Property	Type	Description
Transactions	List of MerchandiseTransactionRecords (see below)	Will be ordered by TransactionDate descending
Cursor	string	Will be null if no pages remain
ErrorStatus	ErrorStatus (see below)	Includes error code and description

MerchandiseTransactionRecord

These properties are grouped here for clarity, but they all exist at the root of this object. Each transaction record identifies metadata and transaction specific information related to a particular Collectible Edition (NFT) or Pack Edition in the Marketplace.

Property	Type	Description
ThumbnailUrl	string	Contains the URL to the thumbnail asset of the Collectible (NFT)/Pack
ThumbnailType	string	One of the following values: ● "Image" ● "Video"
ThumbnailMediaType	string	One of the following values: ● "image/png" ● "video/mp4" ● "application/x-mpegURL"
MerchandiseName	string	Name of the Collectible (NFT)/Pack
MerchandiseKey	Guid	Unique Marketplace identifier for the Collectible (NFT)/Pack

MerchandiseType	string	See MerchandiseType definition
EditionNumber	int	Is the numerical edition number of the particular edition related to this transaction. Will be null for Packs. Will always be less than the TotalQuantity of the given Collectible (NFT)/Pack
MerchandiseEditionKey	Guid	Unique Marketplace identifier for the specific edition of the Pack Will be null for Collectibles
TotalQuantity	int	Total number of minted Editions of this Collectible (NFT)/Pack Edition
CollectionKey	Guid	Unique Marketplace identifier for the Collection this Collectible (NFT)/Pack Edition belongs to
CollectionName	string	Name of the Collection this Collectible (NFT)/Pack Edition belongs to
SupplierKey	Guid	Unique Marketplace identifier for the Supplier this Collectible Edition (NFT)/Pack Edition belongs to
SupplierName	string	Name of the Supplier this Collectible Edition (NFT)/Pack Edition belongs to
Attributes	List of Attribute Objects (see below)	Attributes and values assigned to the Merchandise that is the subject of the transaction

ParentMerchandiseKey	Guid	Currently only populated for the PackAward TransactionType: Identifies the Pack that produced this Collectible Edition (NFT)
ParentMerchandiseEdition Key	Guid	Currently only populated for the PackAward TransactionType: Identifies the specific Pack edition that produced this Collectible Edition (NFT)
ParentMerchandiseName	string	Currently only populated for the PackAward TransactionType: The name of the Pack that produced this Collectible Edition (NFT)
TransactionKey	string	This is a unique identifier for this transaction in the Marketplace
TransactionType	string	See TransactionType definitions
TransactionDate	DateTime	The date/time the transaction occurred (in UTC)
Username	string	The DK username of the user involved with the transaction (IE user who bought the NFT)
UserKey	Guid	A unique key identifying the user involved with the transaction
Amount	decimal	A decimal value showing the value of the transaction (IE purchase price)
CurrencyCode	string	Currency of the transaction - currently always "USD"
BlockchainTransactionHash	string	Unique transaction hash identifying the transaction on the blockchain.

		Currently only available for these TransactionTypes: ● TransferComplete ● DepositComplete
BlockchainTransactionUrl	string	URL to the blockchain-specific "blockscan" site showing the status of this transaction Currently only available for these TransactionTypes: ● TransferComplete ● DepositComplete
BlockchainWalletAddress	string	Wallet address of either the destination or origination of this transaction. Currently only available for these TransactionTypes: ● TransferComplete (destination wallet) ● DepositComplete (origin wallet)
BlockchainWalletUrl	string	URL to the blockchain-specific "blockscan" site showing the wallet Currently only available for these TransactionTypes: ● TransferComplete (destination wallet) ● DepositComplete (origin wallet)
RelatedTransactionCount	int	If this value is greater than zero then that is an indication that this transaction is the "Parent" of another transaction.

		This is only the case currently for PackOpened TransactionType - in this case this value represents the number of awards generated from this Pack Edition

Attribute

Property	Type	Description
Name	string	The name of this attribute - IE "Position"
ValueType	string	Indicates what data type is represented in the Value property from the following possible values: ● "Number" ● "Text" ● "Boolean"
Value	string	The specific value for the given attribute - IE Name: "Position" Value: "Quarterback"
ValueUrl	string	Hyperlink associated with this attribute value

ErrorStatus

Property	Type	Description
Code	string	See Error Codes below
ErrorMessage	string	Description of the error - can be provided with support requests
HttpStatusCode	int	Common Http Status code provided on every response

Error Codes

These codes can be returned from the Activity API

Code	Description	HTTP Status Code
"MPA-400"	Bad Request	400
"MPA-408"/"MPA-410"	Feature Disabled	501
"MPA-500"	Internal Server Error	500

Example

Description	Retrieve the most recent Sales transaction from all Collectibles in the Reignmakers Football Collection

Request	curl --location --request POST 'https://marketplace.draftkings.com/api/activity/v1/transactions' \
	--header 'Content-Type: application/json' \
	--data-raw '{
	   "EventTypes": ["Sales"],
	   "MerchandiseType": "Collectible"
	   "CollectionKeys": ["5EAE2563006D4FE0AE1405A31567C60C"]
	   "Limit": 1
	}'

Response

        "relatedTransactionCount": 0
    }
  ],
  "cursor": "1667939089000|bqapPq"
}
```

Cursor Use

The Transaction query is paged and defaults to 200 records (this is also currently the max allowed). This means that the response from the Transactions endpoint will contain a string Cursor property if there are more records that match the specified filters. This Cursor property can be passed into a subsequent call to the query which, if combined with the same filter parameters, will result in the next page being returned with no duplicate data.

From the example above, to get the next page you would simply add the Cursor property from the response as a parameter to the API call:

```
curl --location --request POST
'http://test-marketplaceapi.test.dkinternal.com/public/activity/v1/transactions' \
--header 'Content-Type: application/json' \
--data-raw '{
    "EventTypes": ["Sales"],
    "MerchandiseType": "Collectible"
    "CollectionKeys": ["5EAE2563006D4FE0AE1405A31567C60C"]
    "Limit": 1
    "Cursor": "1667939089000|bqapPq"
}'
```

Limits and SLA

SLA	Expected
```

| | |
|---|---|
| Rate | No more than 200 requests per 30 seconds<br><br>If this rate is violated, the offending IP will be banned for 1 hour.<br><br>If banned, client will receive HTTP code 429 |
| Expected latency | 100-300 ms<br><br>Should not take longer than 1 second at maximum |
| Maximum Transactions per request | We do not allow requests for more than 200 transactions at a time |

# Related Transactions Query

## Route

| Route | Description | Example |
|---|---|---|
| POST /transactions/related | Retrieves transactions related to a provided transaction key. Only returns if a transaction has related transactions (`relatedTransactionCount > 0`). | Retrieve all Sales transactions:<br><br>*curl --location --request POST 'https://marketplace.draftkings.com/api/activity/v1/transactions/related' \*<br><br>*--header 'Content-Type: application/json' \* |

| | | --data-raw '{<br>   "TransactionKey":  "XYZ"<br>}' |
|---|---|---|

## Request Parameters

| Parameter | Type | Description |
|---|---|---|
| TransactionKey | String | Provide the key for a Transaction you want to get related Transactions for. This is a unique identifier for this transaction in the Marketplace. |

## Response

### Body

This is the main body of the response

| Property | Type | Description |
|---|---|---|
| Transactions | List of MerchandiseTransactionRecords (see below) | Transactions related to the TransactionKey provided. |
| ErrorStatus | ErrorStatus (see below) | Includes error code and description |

### MerchandiseTransactionRecord

*See table under Activity Feed Query above*

### ErrorStatus

*See table under Activity Feed Query above*

## Error Codes

These codes can be returned from the Related Transactions API

| Code | Description | HTTP Status Code |
|---|---|---|
| "MPA-400" | Bad Request | 400 |
| "MPA-408"/"MPA-410" | Feature Disabled | 501 |
| "MPA-500" | Internal Server Error | 500 |

## Example

| Description | Retrieve the Collectibles received from a Pack that was opened. Prerequisite use the Activity API to get the TransactionKey from an Open transaction |
|---|---|
| Request | *curl --location --request POST 'https://marketplace.draftkings.com/api/activity/v1/transactions/related' \ --header 'Content-Type: application/json' \ --data-raw '{ "TransactionKey": "%2bOUPcSgNNW4jP%2bptosJmnlFdB5D4I%2bTzrV6IZP5LHPM%3d" }'* |

Limits and SLA

SLA	Expected

Rate	No more than 30 requests per 30 seconds (1 request per second) If this rate is violated, the offending IP will be banned for 1 hour. If banned, client will receive HTTP code 429
Expected latency	100-300 ms Ideally should not take longer than 1 second at maximum

Collections and Suppliers

These keys can be used as filters on the activity feed query. We will soon be providing an endpoint that can be used to retrieve these, but the current list is provided here for easy reference.

Collections

Reignmakers

Collection Name	Collection Key
Reignmakers Football Collection	5EAE2563006D4FE0AE1405A31567C60C
